ANCHOR

Stay grounded, keep moving

Anchor is “Team YOU” at every stage of care from wellness to mild to mid severity and acute care. We are designed for both care receivers and care providers, thereby providing the first integrated, interoperable, multi-modal, multi-stakeholder platform for mental health.

Our philosophy is grounded in privacy, sensitivity, humanity and expertise. We lead with purpose-built AI in low to mild severity stages and switch to domain trained AI assisting experts in more acute stages. Deep data context and data driven continuity across all stakeholders and all stages of care give Achor an un-paralleled advantage in delivering deep context and measurable outcomes.

Our voice based conversational design coupled with AI assisted assessment and therapeutics removes the friction associated with getting professional help. We are grounded in human centric design. Anchor engages with you in a context aware, reflective, companion mode by mashing up the contextual intelligence of LLMs (Large Language Models) and action intelligence of LBMs (Large Behavioural Models).

Apart from offering a strong base of experts matched to your specific needs, our platform allows users to bring in the support of peers and family, thereby, creating the best of social + wellness, without the amplification of social media. Anchor is your private space for reflecting, sharing, developing mindfulness, seeking professional support, adopting therapies, aligning and committing to care plans and measuring your progress and recovery. It is measurable care designed for you, at your pace with the best of peer and expert support.

We at Anchor believe that wellness is a continuum where we oscillate across states. Sadly, care is currently delivered in silos across difference stakeholders. The care value chain is broken with no point of accountability, quality challenges, poor retention and very poor evidence of recovery.

Increasing adoption of digital platforms for wellness, especially LLMs indicates a latent need for a holistic and comprehensive digital wellness platform. The Indian mental health ecosystem is grossly underserved, under capacity and fraught with structural weakness. Demand supply gaps is at over 10X, going to 30X for specialised support. Access is available to 1 in 5; retention rates are extremely low and treatment adherence is at under 10%. The digital therapeutics space offers a $3B opportunity in India alone. The coming of LLMs and LBMs offers the most effective way to leverage AI in the human loop and human in the AI loop based on context. Tech led transformation for mental health is here with Anchor.

Stay grounded, keep moving

DETAILED

The Problem: A Broken Care System

Mental wellness isn't binary—we all oscillate across states. Yet today's care is fragmented across disconnected stakeholders: wellness apps that can't scale to clinical needs, therapists who lack continuity with psychiatrists, inpatient teams isolated from outpatient care.

The result? No accountability. Quality suffers. Retention plummets. Recovery evidence is scarce.

In India, the crisis is acute:

- 10-30X demand-supply gap for mental health professionals
- Only 1 in 5 people can access care
- <10% treatment adherence due to stigma, cost, and disconnected experiences
- A $3B digital therapeutics opportunity waiting for the right solution

The Solution: Anchor is "Team YOU"

Anchor is the first integrated, interoperable, multi-modal platform that serves all stakeholders—members, therapists, psychiatrists, care coordinators, and inpatient teams—across every severity stage.

Wellness → Mild → Moderate → Acute → Recovery
One platform. Full continuity. Deep context.

How We're Different

1. Human-AI Partnership, Calibrated by Severity

- Wellness & mild cases: AI-led support with conversational companions, mood tracking, and therapeutic exercises
- Moderate & acute cases: AI assists expert clinicians with session notes, risk alerts, and treatment insights
- Always: Human judgment remains central; AI amplifies, never replaces

2. Mood based, Conversational, Voice-First Design
Seeking help shouldn't feel like filling out forms. Anchor's voice-based interface removes friction:

- Context-aware conversations that remember your history
- Reflective prompts powered by Large Language Models (contextual intelligence)
- Action nudges driven by Large Behavioral Models (evidence-based interventions)

3. Your Private Social Circle
Bring in peers, family, or support groups—on your terms. Anchor creates the connection benefits of social platforms without amplification, comparison, or toxicity. Share progress, celebrate wins, get support in rough patches.

4. Continuity That Heals
When you move from a therapist session to a psychiatrist consultation, or from outpatient to inpatient care, your context travels with you. No repeating your story. No fragmented records. Just seamless care.

5. Built on Core Values

Privacy: End-to-end encryption, HIPAA compliance, member-controlled data sharing
Sensitivity: Stigma-free language, trauma-informed design, cultural awareness
Humanity: Empathy over efficiency, validation over solutions, progress over perfection
Expertise: Evidence-based therapies (CBT, DBT, ACT), board-certified clinicians, outcome measurement

6. Measurable Care, At Your Pace

Anchor isn't just about feeling better—it's about proving you're better:

- Validated assessments (PHQ-9, GAD-7) track symptom changes
- Journaling patterns reveal mood triggers
- Treatment adherence data informs care adjustments
- Recovery milestones celebrate progress

All delivered at your pace, with the right mix of peer support and expert guidance.

The Anchor Advantage

Where others offer point solutions—meditation apps, teletherapy platforms, EHR systems—Anchor offers the entire care continuum:

✅ Integrated: All stakeholders see the full picture
✅ Interoperable: Data flows from wellness apps to clinical records

✅ Multi-modal: Text, voice, video, in-person—whatever works for you
✅ Multi-stakeholder: Members, families, therapists, psychiatrists, care teams
✅ Evidence-based: Built on decades of clinical research + emerging AI breakthroughs

Why Now? The AI Inflection Point

The explosion of AI adoption—especially Large Language Models—reveals a hunger for accessible, stigma-free mental health support. But chatbots alone can't treat clinical depression. And therapists alone can't scale to meet demand.

Anchor bridges that gap.

We leverage AI where it excels (conversation, pattern recognition, personalization) and defer to humans where they're irreplaceable (empathy, clinical judgment, crisis intervention). This human-in-the-AI-loop and AI-in-the-human-loop model represents the future of mental healthcare.

Tech-Led Transformation is Here

Anchor combines:

- LLMs for conversational intelligence and contextual understanding
- LBMs for evidence-based therapeutic interventions
- Real-time data for adaptive care plans
- Unified platform for stakeholder coordination
- HIPAA-compliant security for trust and privacy

Mental health deserves the same digital transformation that revolutionized ride-sharing, food delivery, and entertainment. That transformation is Anchor.
